A CSL Company

Dear Customer

30 January 2003

Re: **Request For Material Safety Data
Sheets (MSDSs)**

Please note that hazard communication standard does not require MSDSs for our products, ZLB's Carimune, Immune Globulin Intravenous (Human) Lyophilized Preparation and our Albumin (Human) 5% and 25% solutions, since they are not considered "hazardous substances."

However, it is important to point out that products made from human blood, such as, are covered by bloodborne pathogens standard, based upon the definition of "blood" in the regulation.

The attached product information sheets required by FDA regulations can answer any questions that you may have about the safety of these two products.

We would appreciate this information being disseminated within your company to those people who purchase products from ZLB Bioplasma.

Thank you for choosing ZLB Bioplasma to meet your health care needs.

Sincerely,

Craig B. Mendelsohn, M.D., J.D.
Medical Director
